

The IES Leixa is an educational institution supported by public funds. It depends on the Education of the Government of the Autonomous Community of Galicia. It has more than 30 years of experience in the field of vocational training.

We offer a wide variety of studies that allow students to obtain an adequate professional development in line with the demands of society. Under the Higher Education sector, IES Leixa offers Higher Technician Degrees in the Graphic arts and Health Care areas.

As our previous experience in European programs, we have participated in mobility of teachers within the Leonardo program and every year we program visits to international fairs in different European cities: Dusseldorf, Birmingham, Milan, ... conducting site visits of higher education in our areas of knowledge.

The main objective of the IES Leixa in applying the EUCP is to collaborate in the construction of the European cohesion. The main objective is twofold:

First, we believe that the participation of members of the educational community (teachers, students and staff of the Institution) in the Erasmus program will contribute to consolidate the reality of the European citizenship.

Moreover, we believe we can offer a valuable opportunity to those students, teachers and institutions who might be interested in getting to know us. We would like to make our professional experience and teaching available to them; to let them know our educational projects and to share with them our agreements with companies (we work with more than 200 companies and institutions).

To meet these objectives, our Center has set the following priorities:

- Now In a first time: To offer our students European placements and mobility activities within the EU.
- The next step, will be: To promote the mobility of teachers and staff in order to increase public awareness of the reality of education and employment in Europe and To offer other educational institutions the possibility of making european placements and educational exchanges.

The main activity to be developed would be student placements in European Companies, in short ERASMUS activities will be a key element for:

- Improving the quality and attractive of the Vocational Education Training.
- To increase the exchange experiences and good practices an the cooperation between different systems of education and training.
- To promote the attractiveness of the European High Education space and the lifelong learning.
- To increase European awareness and European citizenship.
