

## COLOR WHEEL

*The color wheel is the basis that artists of all mediums use to produce attractive, cohesive artworks. By using a 12-point color wheel, an artist is able to have a visual representation of primary, secondary and tertiary colors all at one glance. In addition to the basic color families, the wheel also helps to locate more advanced groupings of colors based on harmony types. These types include analogous, those colors located side by side on the wheel, and complementary, those colors located directly opposite of each other on the wheel.*
